

Wawa Facilities Mobile Map features

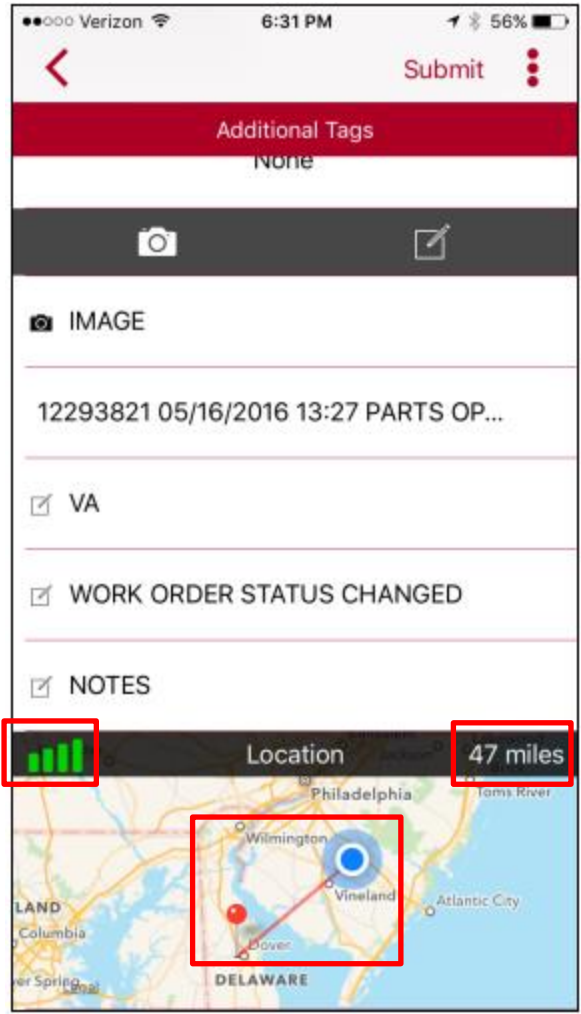

The application will display work orders in a card view as seen above, when needed you can toggle to a map view by tapping on the word map in the upper right hand corner while in a work order work bench view.

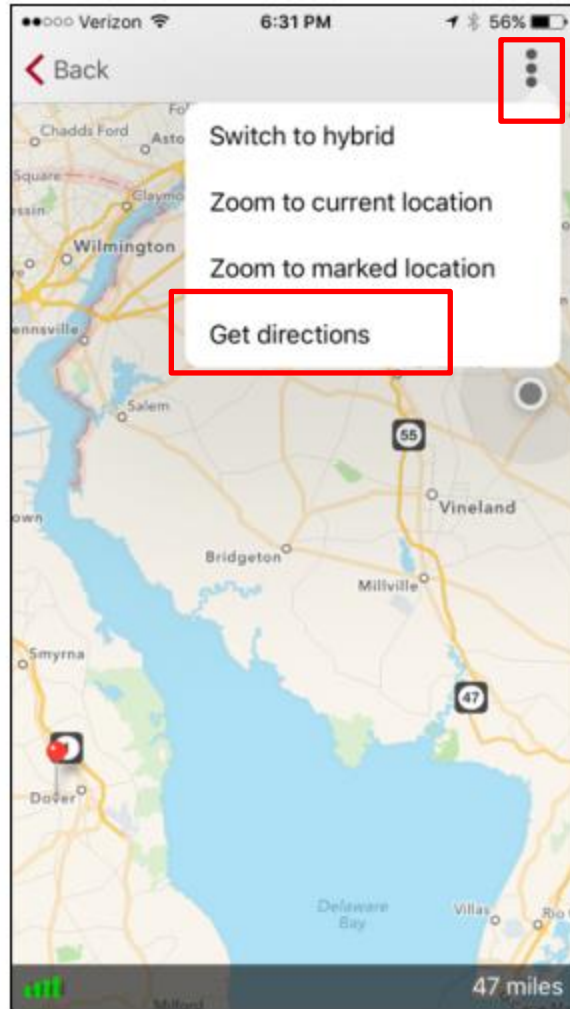

The map will display all of the work orders from the workbench in a map view. If there is more than one work order in any location a number will be displayed in the map pin. Using this view may help you prioritize work or plan a cost effective route.

If you tap on one of the map pins you will see the card or cards associated with that location. The card will provide you with information regarding the work order including your current distance from the site. You can open the work order detail form from this view if you would like to see more information or get directions.

The map at the bottom of the work order detail view will show a red pin for the site location and a blue beacon for yours. The bars at the left indicate the level of strength / accuracy of the location services and you will also see your current distance from the site at the right. Tap on the map to see a more detailed view.

If you would like driving directions to the site, tap on the three dots in the upper right hand corner. Tapping on get directions will open the mapping program for your device and provide you with the best route to get to the site.
